## Rapid Thaw™

All Natural Ice Melt Product

---

Rapid Thaw is an all-natural, uniquely colored granular ice melt product containing only naturally occurring ingredients. Rapid Thaw starts with the tried and true technology of solid granular deicers and builds upon that technology with a coactive blend of chlorides and minerals. These chlorides and minerals provide Rapid Thaw with its aggressive melting action that keeps it melting faster, lasting longer and melting more than most other granular deicing products available today.

Rapid Thaw fights the tendency to refreeze in two ways, first its proprietary blend of chlorides and minerals synergistically combine to begin melting on contact and continue melting when other granular products have stopped, and secondly Rapid Thaw's natural color allows thermal energy from the sun to be absorbed into the granules and assist with melting.

Environmentally safe and responsible, all-natural Rapid Thaw is the premier granular ice melt product for today's professional. Rapid Thaw, naturally better.

Rapid Thaw	
Recommended Application Rate (Per Lane Mile)	150 lbs
Corrosion Rate (NACE 01-69 PNS Modified)	90%
Moisture	2.0% Max

Made in the USA
